# Building color

## EuraBuild

is our color range consisting of Solid and Metallic colors. The finishes in this brochure are just the start. We can custom develop virtually every solid and metallic color.

## Coating quality

The binder is the main building block of coatings. It defines many characteristics of the coating. We supply a wide range of coating types: PE / HDP / PUR-PA / PVDF & LUM. Coating type defines:

- Long term performance and warranty period
- Flexibility and abrasion resistance
- Color and gloss level possibilities

## Important

Not all paint types are suitable for all environments. In areas with high sun intensity, close proximity to salt water and chemical installations it is important that the right coating quality is chosen. Especially in these cases, contact our Architectural Support department or look for more details on [www.euramaxlab.com](http://www.euramaxlab.com)

## Guidelines

- Install metallic panels in the same direction to avoid reflection differences
- Order projects in one batch to avoid color differences
- Warranty indications are maximum warranty periods
- Many other colors available on [www.euramaxlab.com](http://www.euramaxlab.com)
